 Value from Innovation

# The powerhouse for excellent images

**FUJIFILM Frontier LP9700**

# Maximum power for your image business

If you value top performance in the picture business, a Wetlab is still the first choice.

Only a Wetlab offers you high speed combined with the unsurpassed beauty of first-class silver halide prints.

# The new FUJIFILM Frontier LP9700

The new FUJIFILM Frontier LP9700 features the latest technology and impresses with strong print performance, excellent image quality and great versatility. And if you complement it with the creative duplex printer CX 3240, you have real superpower for your picture business.

## First-class image quality

### New development in laser exposure technology

The LP9700 is equipped with directly modulated semiconductor lasers that allow digital exposure with incredible image quality. Fine details and subtle changes in colour tone are reproduced in high resolution.

**Superior image** processing Fujifilm's Image Intelligence™ technology automatically compensates for problematic conditions such as poor lighting, excessive backlight, high contrast or under- and over-exposure, reliably ensuring beautiful images.

## Improved usability

### Triple/quad magazine system (factory option)

By installing the optional triple or quadruple magazines, you can offer a wide range of paper types and sizes without having to constantly replace magazines.

### Flashing light

A status light can be installed on the upper part of the device. This means you can see what the Minilab is currently doing, even from a distance.

## High speed

The double paper feed and chemistry optimised for fast processing allow high-speed development with excellent quality.

The LP9700 achieves very high print speeds:

**2.117** Prints/hour  
with format 10 x 15 cm

- Approx. 1,304 prints/hour with format 13 x 18 cm
- Approx. 614 prints/hour with format 25 x 20 cm
- Approx. 501 prints/hour with format 25 x 30 cm
